## **55805**

Seat No.\_\_\_\_

## Third Year B. C. A. Examination

April / May – 2003

## Visual & Windows Programming (BCA-305)

| Time | : 3        | Hours]                                             | [Total Marks :  | 70 |
|------|------------|----------------------------------------------------|-----------------|----|
| 1    | Do a       | as directed : (attempt any <b>ten</b> )            |                 | 10 |
|      | (1)        | List different editions of Visual Basic.           |                 |    |
|      | (2)        | What is the use of SubMain?                        |                 |    |
|      | (3)        | How will you register ActiveX control              | in windows?     |    |
|      | <b>(4)</b> | Define: Property and Method                        |                 |    |
|      | (5)        | Is it compulsory to declare a variable be (Yes/No) | efore using it? |    |
|      | (6)        | Explain WITHEND with statement we example.         | ith a suitable  |    |
|      | (7)        | What is the use of "static" keyword?               |                 |    |
|      | (8)        | Give extensions for different module ty            | ypes in VB.     |    |
|      | (9)        | How will you set timer for 10 seconds              | ?               |    |
|      | (10)       | Explain SelStart and SelLength properties Box.     | es of Rich Text |    |
|      | (11)       | What is the use of Password Char pro Box?          | operty of Text  |    |
|      | (12)       | What is the use of Form Layout wind                | ow ?            |    |
| 2    | (a)        | Explain following properties and metho             | ods :           | 5  |
|      |            | (1) Clear method (Combo Box)                       |                 |    |
|      |            | (2) Tick frequency                                 |                 |    |
|      |            | (3) Interval                                       |                 |    |
|      |            | (4) Fixed Rows (Flex grid)                         |                 |    |
|      | <i>a</i> ) | (5) Item (Collection)                              |                 | _  |
|      | (b)        | Explain all Cursor types and Lock type             | oes in ADO.     | 5  |
|      |            | OR                                                 |                 |    |
|      | (a)        | Define following terms :                           |                 |    |
|      |            | (1) IDE                                            |                 |    |
|      |            | (2) Bang Menu                                      |                 |    |
| 5580 | 5]         | 1                                                  | [Cont           | td |

|   |                  | <ul><li>(3) VbCrLf</li><li>(4) Ambient Property</li><li>(5) DSN</li></ul>                                                                                                                                                                                                                        |        |  |  |  |
|---|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|--|--|--|
|   | (b)              | Explain in detail. ActiveX EXE and ActiveX DLL. Give comparison between them.                                                                                                                                                                                                                    | 5      |  |  |  |
| ; | <b>3</b> (a)     | <ul><li>Differentiate the following:</li><li>(i) Procedural programming and Event driven programming.</li><li>(ii) Array and Collection.</li></ul>                                                                                                                                               | 4      |  |  |  |
|   | (b)              | Write codes to add all employee names from Emp                                                                                                                                                                                                                                                   | 4      |  |  |  |
|   | (c)              | table using recordset object of ADO.  Write a shortnote on Package and Deployement  Wizard.                                                                                                                                                                                                      | 2      |  |  |  |
|   | OR               |                                                                                                                                                                                                                                                                                                  |        |  |  |  |
| ; | <b>3</b> (a)     | Explain Array and Dynamic Arrays. Explain Dim and Redim statements to declare arrays.                                                                                                                                                                                                            | 4      |  |  |  |
|   | (b)              | Value 1 and Value 2 and three text boxes namely text 1, text 2, text 3. The first property value 1 is dealing with text 1 and second property value 2 is dealing with text 2. Create one method addition, which will add two values given in text 1 and text 2 and display the answer in text 3. |        |  |  |  |
|   | (c)              | How to create popup menu on right click of mouse?                                                                                                                                                                                                                                                | ۵      |  |  |  |
| 4 | <b>4</b> (a) (b) | List and explain all application types in VC++. Write a code to create RGB model using three scroll-bars. The color will be available as a background colour of Label.                                                                                                                           | 5<br>3 |  |  |  |
|   | (c)              | Explain all ON ERROR statements in brief.                                                                                                                                                                                                                                                        | 2      |  |  |  |
|   | OR               |                                                                                                                                                                                                                                                                                                  |        |  |  |  |
| 4 | <b>4</b> (a)     | List all resources available in VC++. Explain all of them in brief.                                                                                                                                                                                                                              | 5      |  |  |  |
|   | (b)              | Write a code for Cut, Copy, Paste in Notepad application.                                                                                                                                                                                                                                        | 3      |  |  |  |
|   | (c)              | Explain in brief : Features of V.B.                                                                                                                                                                                                                                                              | 2      |  |  |  |
| ļ | 55805]           | 2 [Conto                                                                                                                                                                                                                                                                                         | l      |  |  |  |

| <b>5</b> | (a) | Explain in detail: All project types in VB.       | 5 |
|----------|-----|---------------------------------------------------|---|
|          | (b) | Write steps to create RTF/HTML help.              | 5 |
|          | (c) | List all Microsoft Common controls and explain    | 2 |
|          |     | toolbar in brief.                                 |   |
|          |     | OR                                                |   |
| 5        | (a) | Explain in detail : Microsoft Windows Common      | 5 |
|          |     | Dialog Control.                                   |   |
|          | (b) | Explain Data Environment in brief.                | 3 |
|          | (c) | Explain all statements to declare variable in VB. | 2 |
